

Strategic Role in the Norfolk Public Schools as district technology coordinator.

When I assumed the role of the Norfolk Public Schools district technology coordinator, I managed the installation of leased lines, routers, and network equipment in each of the other buildings in my district. Along with a few NJHS science teachers, I installed the local network devices, cabling, and terminations needed to provide connectivity to science classrooms in each of our buildings as part of our SciTech project. SciTech was the name of the project that was awarded a \$300,000 grant from the lottery grant system.

When the Nebraska State Legislator provided funding for expansion of the internet in public schools, it was my role to coordinate the choice of equipment and contractors to provide network connections throughout the entirety of our school buildings.

I set up web servers for each of our district buildings and provided training for staff in management and in the creation of content for those servers. Training for staff in the use of email was also part of my responsibility.
